

1. Clicked on new idea and it opened up this new page. Earlier the issue was that on the left hand side it used to show the earlier run files. Right now it doesn't show any artifact and clearly says no artifact yet run a fresh idea. However, on the right hand side, it still shows stage 14 out of 14 and the life cycle map still shows the previous run information. So that needs to be cleaned up as soon as we click on idea gate. So we can save this information in our system and then amend this and rectify this sometime when we pick the right thing

The refresh button still doesn't work. Um also we need to add uh some loading sign uh to idea gate, some animated loading or some new age, modern, sleek loading animation.

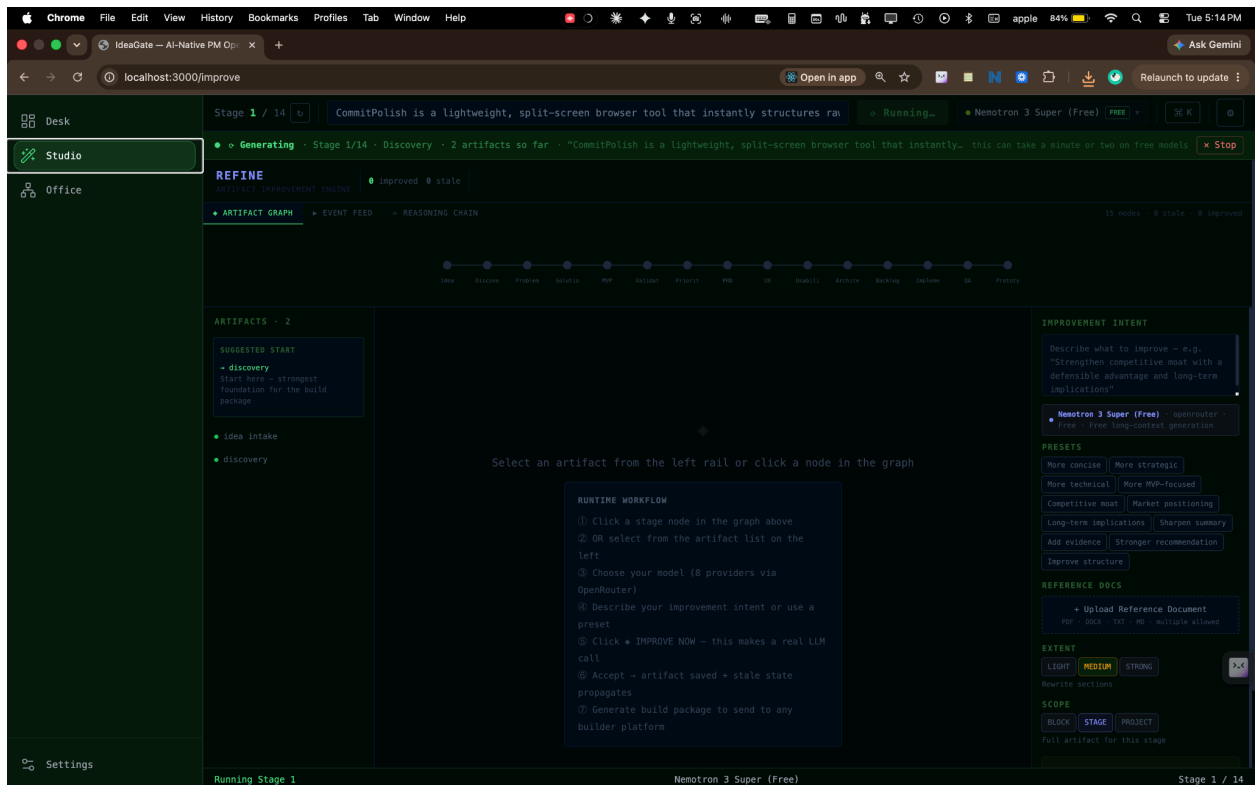

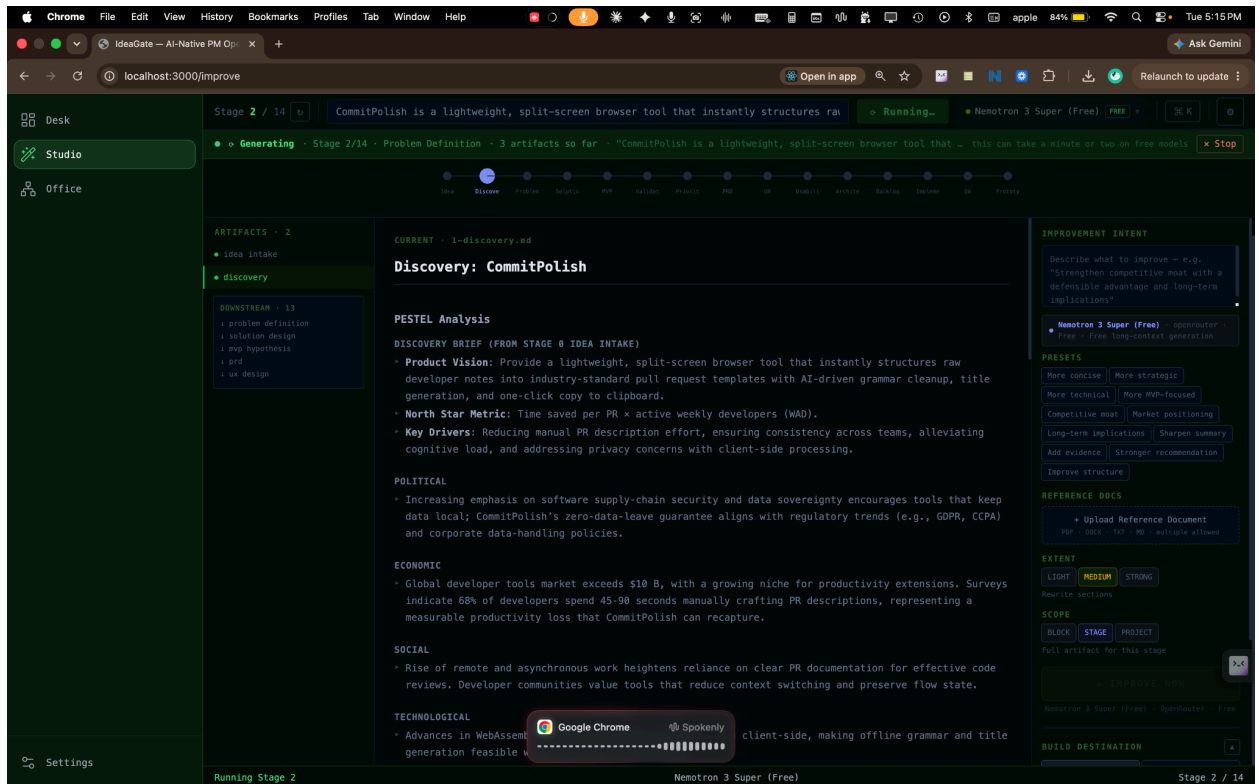

2. This screen is immediately after running an idea.

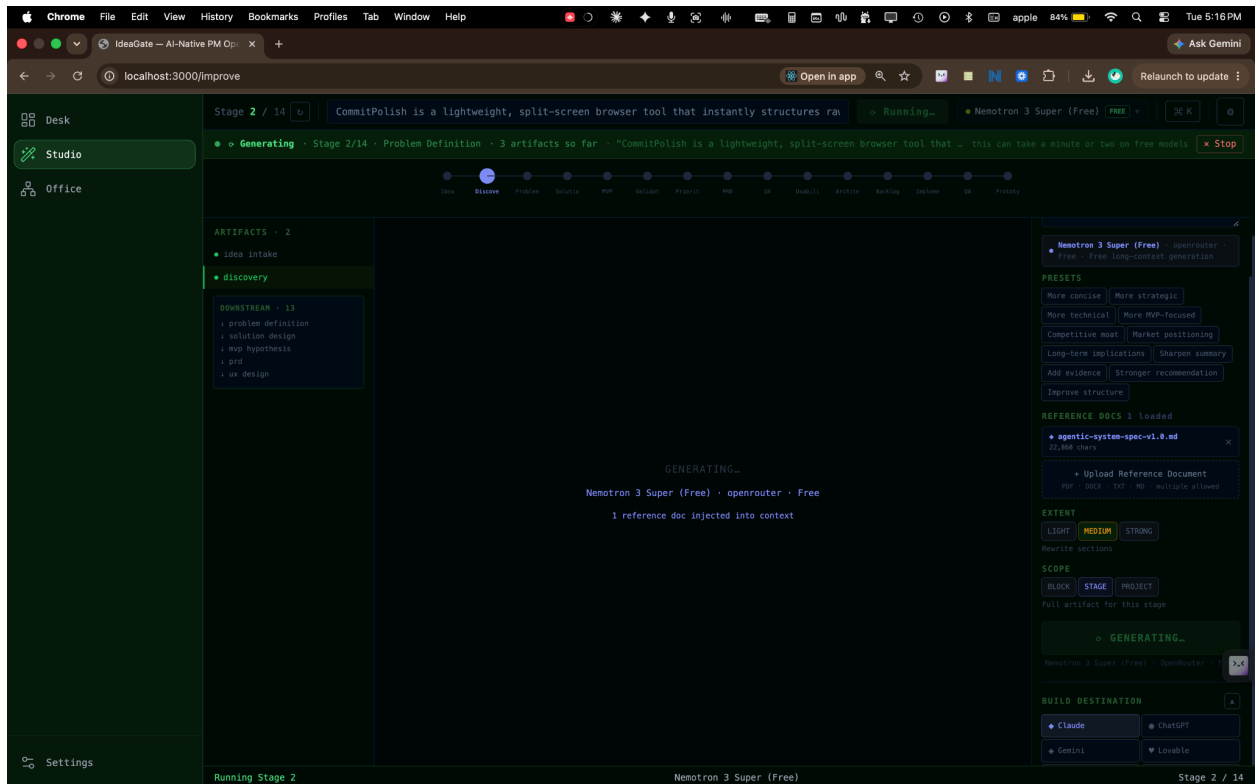

3. This screen is after the first document state 0 is run and its idea intake. So, this is what I see in idea intake. The file that it has created is 4 kb and this is what it looks like

with 546 words. Also, if you check the top below the top bar, there is a component section where it's NSM lens, vision, Nord Star matrix, key drivers, inputs, current state baseline, hypothesis, success criteria, etc. etc. So earlier, we thought of making it in a pill section, increasing the size and making it at a pin section so it clickable for the user and looks like buttons, pill buttons to hop onto that section in the document. That is what we have planned to do. And sometime we have to uh pick this up uh in our design uh document and even get that element rectified when it's the right time. Clicked on download and it works

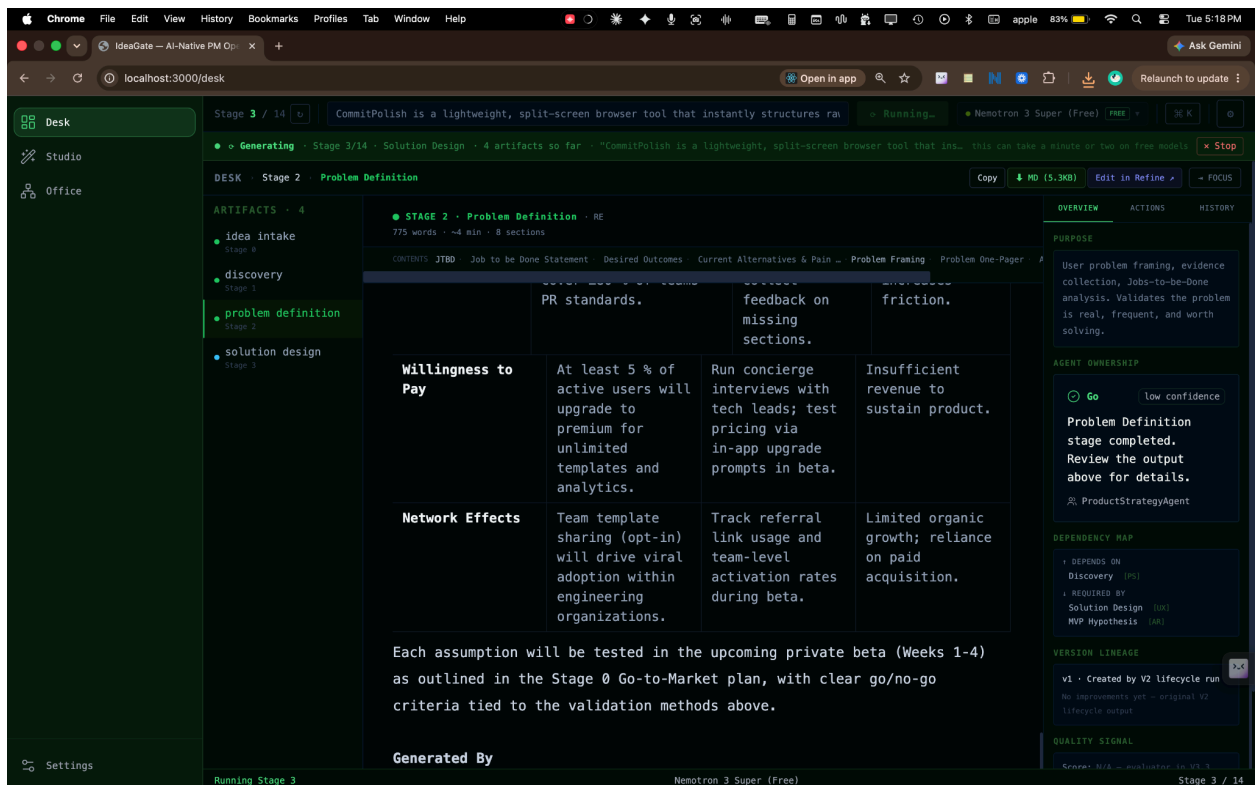

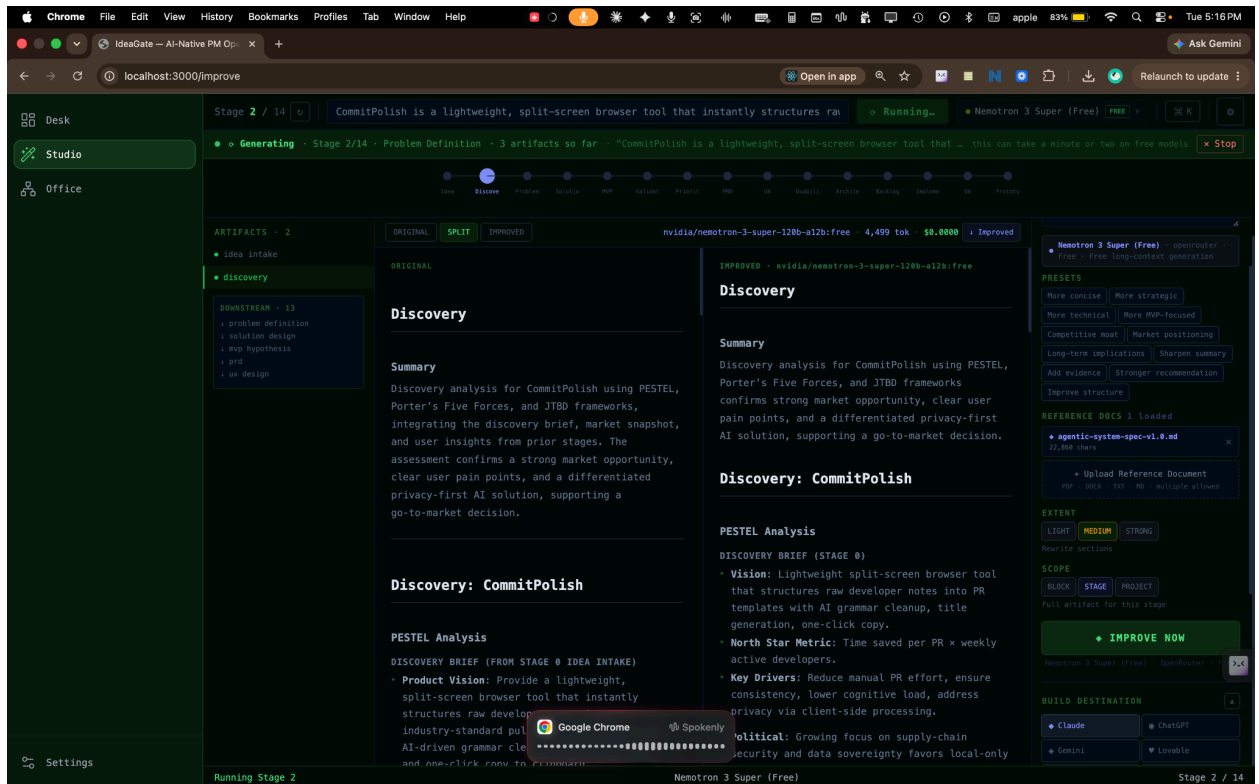

4. This is what I see in the studio section. Ideally uh as per design uh if you see the the timeline where there is a ball and the line uh the idea and discovery should glow as per the theme light in Neon, but it's not glowing. So, this is a bug. Two documents have been generated and it's not showing up there. However, when I click on any of the document, that's when it highlights. So I have attached that screenshot as well.

5. Just for testing purpose I uploaded a markdown file and clicked on improve and this is what it shows. No errors yet. It shows a split screen uh and it shows uh two sides, original and improved. You can take a look at it uh in the screenshot uh that I have attached. Below and there are three buttons as well: original, split, and improved.

6. This is the problem definition uh screenshot. Feed feedback pretty much remains the same No error found here

The screenshot shows the OpenRouter API logs interface. The left sidebar contains navigation options like API Keys, Guardrails, BYOK, Routing, Presets, Plugins, Observability, Classifiers, and Settings. The main area is titled 'Logs' and shows a table of generations. The table has columns for Date, Model, Provider, App, Input, Output, Cost, Usage Type, Speed, Finish Reason, and API Key. The data shows multiple generations using the Nemotron 3 Super (free) model from NVIDIA, with various input and output token counts and costs.

Date	Model	Provider	App	Input	Output	Cost	Usage Type	Speed	Finish Reason	API Key
Jul 14, 05:18 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,908 tok	1,895 tok	\$ 0.00	Credits	79.5 tok/s	stop	IdeaGate-Only
Jul 14, 05:17 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,052 tok	2,908 tok	\$ 0.00	Credits	86.5 tok/s	stop	IdeaGate-Only
Jul 14, 05:17 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,920 tok	2,502 tok	\$ 0.00	Credits	59.9 tok/s	stop	IdeaGate-Only
Jul 14, 05:16 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,057 tok	2,505 tok	\$ 0.00	Credits	49.3 tok/s	stop	IdeaGate-Only
Jul 14, 05:15 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	1,642 tok	2,837 tok	\$ 0.00	Credits	125.4 tok/s	stop	IdeaGate-Only
Jul 14, 05:15 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,052 tok	3,331 tok	\$ 0.00	Credits	57.3 tok/s	stop	IdeaGate-Only
Jul 14, 05:14 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,952 tok	1,822 tok	\$ 0.00	Credits	27.9 tok/s	stop	IdeaGate-Only
Jul 14, 05:13 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,052 tok	2,951 tok	\$ 0.00	Credits	63.7 tok/s	stop	IdeaGate-Only
Jul 14, 05:12 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,884 tok	2,432 tok	\$ 0.00	Credits	80.6 tok/s	stop	IdeaGate-Only
Jul 14, 05:12 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,101 tok	2,678 tok	\$ 0.00	Credits	60.1 tok/s	stop	IdeaGate-Only
Jul 14, 05:11 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,105 tok	4,801 tok	\$ 0.00	Credits	93.0 tok/s	stop	IdeaGate-Only
Jul 14, 05:10 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	1,934 tok	1,624 tok	\$ 0.00	Credits	81.9 tok/s	stop	IdeaGate-Only
Jul 14, 05:10 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	441 tok	1,665 tok	\$ 0.00	Credits	125.3 tok/s	stop	IdeaGate-Only
Jul 13, 09:50 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,961 tok	5,715 tok	\$ 0.00	Credits	74.0 tok/s	stop	IdeaGate-Only
Jul 13, 09:49 PM	Nemotron 3 Super (free)	NVIDIA	IdeaGate PMOS	2,059 tok	3,406 tok	\$ 0.00	Credits	110.1 tok/s	stop	IdeaGate-Only

7. Stop the lifecycle run and I check the open router logs and this is what I see.

The screenshot shows the IdeaGate interface. The left sidebar has navigation options like Desk, Studio, Office, and Settings. The main area is titled 'Stage 4 / 14' and shows a 'CommitPolish' tool. The 'Generation failed' message is visible. The 'MVP Hypothesis' stage is selected, showing a list of artifacts (idea intake, discovery, problem definition, solution design, mvp hypothesis) and a detailed view of the 'MVP Hypothesis' stage. The 'MVP Hypothesis' stage includes an overview, hypothesis 1 (Time Savings), and an experiment section.

Generation failed Run stopped.

STAGE 4 · MVP Hypothesis - AR

843 words · ~4 min · 10 sections

CONTENTS Overview Hypothesis 1: Time Savings Hypothesis 2: Description Qu... Hypothesis 3: Adoption & Ret... Hypothesis 4: Privacy F...

OVERVIEW

CommitPolish aims to reduce the friction developers experience when turning rough notes into standardized pull-request (PR) descriptions. This MVP hypothesis sheet translates the product vision and goals from the Product Requirements Document into testable assumptions, defines the minimal experiments needed to validate them, and specifies the success criteria that will inform a go/iterate/kill decision.

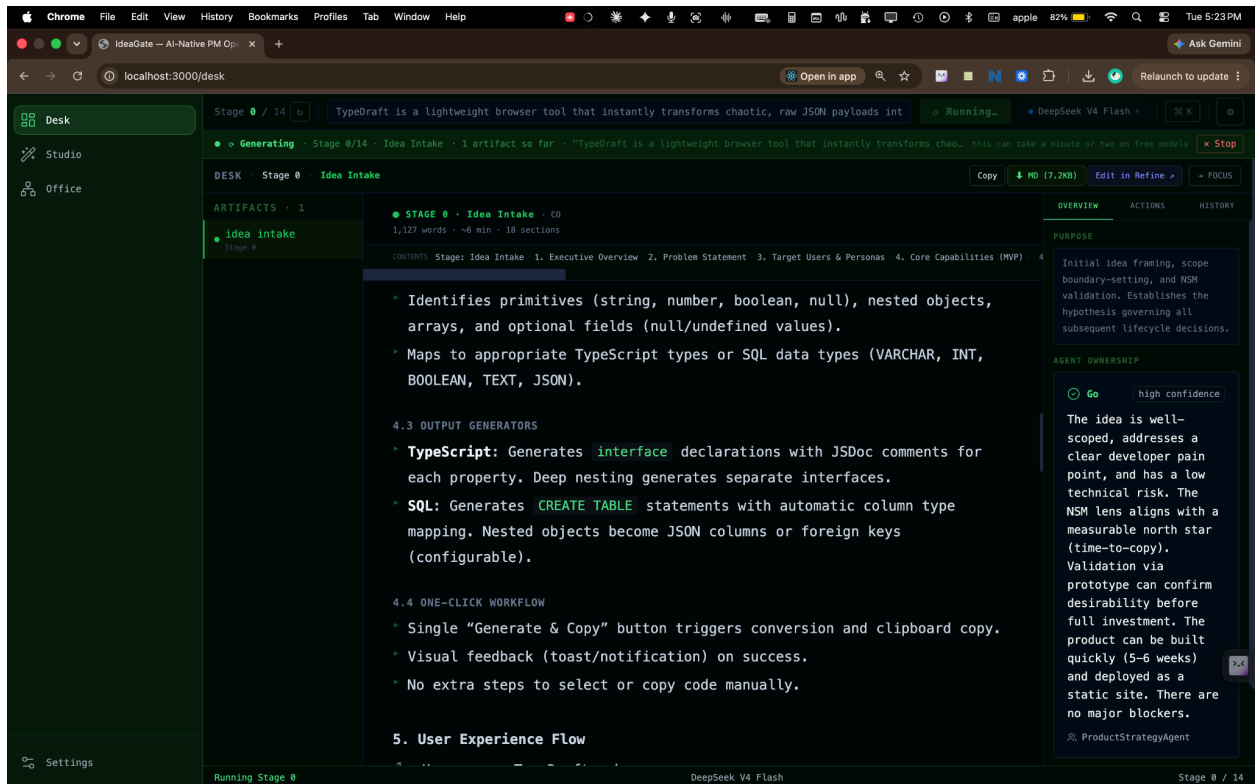

Hypothesis 1: Time Savings

Assumption: Developers will save at least 30 seconds per PR description when using CommitPolish's one-click polishing flow compared to manual authoring.

Experiment:

- Recruit 30 active developers (mix of solo contributors, team leads, and

8. This is what it looks like in Idea Gate, once I click on stop.

9. Now, after stopping the previous run, I clicked a new idea and did a fresh run by changing the model to DeepSeek V4 Flash. So, this is a screenshot of the first idea intake and how it looks like. Again similar to the earlier stage 0.

10. Uh this is what it looks like uh in open router activity log for the first view call

11. Now this is how the office looks like - This is the older version which is looking like flat S V G, total fuck all visualization, not at all usable

12. This is how the live agent activity or agent activity section looks like inside office, which is mission control. Uh and uh It's completely destroyed right now. We need to work on this later, but for now we have deprioritized this.

13. This is the MC scratch uh view of the Office Live page and um this is how it's looking like. Again, this is flat, nothing that we want to use.

14. This is the current uh open router activity log.

The screenshot shows the IdeaGate AI interface in a web browser. The browser's address bar shows 'localhost:3000/improve'. The interface has a sidebar on the left with 'Desk', 'Studio', 'Office', and 'Settings'. The main area is titled 'Stage 4 / 14' and contains a document titled 'MVP Hypothesis - TypeDraft'. The document content includes a hypothesis, test, metric, and criteria for a JSON-to-TypeScript conversion tool. The interface also shows an 'ARTIFACT GRAPH' and a 'REASONING CHAIN'. The document is currently in 'Generating' state, and the 'REFINE' button is visible. The bottom of the interface shows 'Running Stage 4' and 'Nemotron 3 Super (Free)'.

15. This when I clicked on edit and refine and then I clicked on a document and this is how it looks like in studio. I have stopped the run again and uh nothing much To see if there is anything else, let me know
